

## How to Generate Your Own UAN Number

As you all know, the PF office has changed the rules for generating the UAN number. Now, every employee must generate their own UAN number. Employees can generate their UAN through the **UMANG App**. Below are the instructions:

1. First, download the **UMANG Application** from Google Play Store.
2. Your Aadhaar card must be updated.
3. The mobile number linked to your Aadhaar card must be active.
4. Your Aadhaar card should have your updated photograph for face recognition.
5. After completing the above, open the UMANG application on your mobile.
6. In the first step, sign up for the UMANG application using any mobile number.
7. Then go to **Services**, search for **EPFO**, and select it.
8. In EPFO, click on **UAN Allotment & Activation**.
9. Enter your Aadhaar number and the mobile number registered with Aadhaar.
10. Tick the checkbox and click **Send OTP**.
11. You will receive an OTP on your registered mobile number.
12. Enter the OTP and click **Submit**.
13. Within 5 seconds of submitting the OTP, you will be asked for face scan permission.
14. Once you click **OK**, your mobile's front camera will open and face authentication will begin.
15. Position your face in the center of the camera and blink your eyes so your face can be scanned.
16. After this, your complete Aadhaar details will appear on the screen. Click **Submit**.
17. Once you submit, a green confirmation message will appear on your mobile screen, and your UAN will be generated.
18. You will receive an SMS on your Aadhaar-linked mobile number containing your UAN number and a one-time password (OTP). You can then activate your UAN and set your own password.
19. Finally, provide your **UAN number** to your employer so that your PF contributions can start being deposited into your PF account.
